Something went wrong. Wait a moment and try again. Engine is one of the most important parts of the car. Every car owner time by time faces with the engine malfunction, which can be reason of engine overhaul repair or buy a new engine. If we can't do overhaul engine DIY, we need help of car services. The most work on the overhaul of the car engine begins with the diagnosis of the engine. Repair work of gasoline and diesel engines of modern car is possible only with using modern equipment and qualified personnel. You will save yourself from many problems if you choose the right car service. Overhaul of car engines should be carry at specialized service stations. Experienced specialists in the repair of internal combustion engines will be able to take on virtually any car for repair and maintenance. Engine repair without engine removal from the car The first step before engine overhaul you need to carry out a defect in engine parts. However, there is a list of repair operations that doing without removing the engine. The first you need wash of the engine compartment and a wash of the engine. The engine is clean so as not to contaminate the internal parts of the engine. If you decide to replace the engine gasket, (replacement of the engine gasket is carry out in case of leakage of oil or coolant). Engine repair work without removing the engine: Engine oil pan gasket replacing;Cylinder head replacing or cylinder head repair;Intake and exhaust manifold gaskets replacing;Crankshaft seal replacing. You can do the following repairs of engine components without removing the engine: Water pump repair; Starter repair. Repair of the ignition distributor; Repair of the generator; Repair of the fuel pump; Carburetor repair; Repair of the cylinder head; Repair of the valve mechanism.Engine Overhaul reason How can we understand wheather engine overhaul right? To decide on a major overhaul of the engine, a large number of indicators must be analyze. Many motorists mistakenly believe that if there is a large mileage of the car, then there is a need for major repairs of the engine, but this is not always the case, similarly low mileage cannot speak of eliminating the need for major repairs of the engine. The engine life is greatly affects by proper operation and timely maintenance. Delayed maintenance can significantly reduce the life of the engine. Signs of engine wear Such sign as an increase in oil consumption is a piston ring wear symptoms and valve guides wear symptoms (before making such conclusions, be sure to check the engine systems for engine oil leaks). The next step in engine diagnostics will be to measure compression in the engine cylinders, and to check the tightness of the combustion chambers. The set of signs of increased engine wear, such as loss of engine power, uneven engine operation, increased noise, increased fuel and oil consumption indicate the need for major engine repairs. Engine Overhaul involves the restoration of engine parts to the technical condition indicated in the technical specifications of the new engine. Engine Overhaul consists of number of technological operations: Cylinder block boringReplacement of piston rings;Honing engine cylinders;Installation of new pistons;Crankshaft Grinding.Cylinder Head grinding Overhaul gives a new life to your engine and brings its technical characteristics to nominal characteristics. Overhaul may take 2-3 weeks, since it may take a lot of time to repair and restore parts (grinding, boring). In advance, you need to determine the list of ongoing repairs and take care of the availability of special equipment and tools. The presence of special devices that can greatly facilitate the repair of the engine may be very important for overhauls. Check for all necessary parts. The most expensive engine part is the cylinder block. The diagnosis of the cylinder block is a determining factor for the overhaul. There is an alternative here – to restore the cylinder block or buy a cylinder block. This problem must be solve after a thorough check of the engine block. There are many reasons to overhaul your car engine. But you should look out for these 5 signs from your car. Engine Oil is missing Your Fuel Efficiency is dropping Engine sounding weird Engine overheating Smoke billowing from exhaust pipe Before that, let's find out, what is engine overhaul and do you need it? Engine overhaul is basically giving your engine a new life. Most engine wears out over time due to heat and normal wear and tear. Some engine deteriorate quicker than others from being driven too hard like a race car. Or it's affected by not enough engine oil, or lack of maintenance. The list goes on. In short, everything has a shell life. And your engine is no different. When you notice your engine oil level is always dropping, fuel efficiency is not as good as before or there are weird sound coming from the engine, it's best to consult a mechanic to check of there is a need to overhaul your engine. Overhauling your engine is not a simple task. It consist of deconstructing of the engine and having new internal components such as new pistons, piston rings, main bearings, valves and springs. There are many more steps to be listed but just know that other than the engine, everything inside will be new! The engine is removed from the chassis for this job, instead of leaving it in the chassis of your car. The process typically takes about a week to complete as all parts are dissembled and then fixing them back again. The benefits of overhauling your engine is pretty obvious. You will enjoy the engine like it's brand new. Better fuel consumption will be seen. More quieter engine like a new car and the power of your engine will be back! A good overhaul can last you for another good 5 to 10 years. It's as if you got a new car all over again for the next decade. As there are no real timeline on when you should do an engine overhaul. But we suggest that you perform an engine overhaul if you're going to renew your COE. Because why not? Here are some of the view you may not seen before. This is how dirty or worn out you may call it when your engine has been working hard for about 10 years. Does your car billow smoke? Does your vehicle's engine make strange sounds when starting, stopping, while idle or accelerating? Have people ever suggested that you get your car's engine overhauled? Well, maybe you should have it looked at by a professional mechanic, but what actually is a car engine overhaul, anyway? That is a good question to ask, and here is the answer. Car Engine Overhaul When a car's engine begins to sound 'funny', when it idles, while it is accelerating, or as it turns off, then you may need an engine overhaul. Even smoke billowing from the exhaust pipe, or if your car runs too hot, it could spell serious engine damage. It is hard to say without a check-up from a reputable auto service centre like Super Tune, but you just may need to take your engine apart, clean it up and replace any damaged engine parts or seals, and then put it back together like new. Basically, that is exactly what an engine overhaul consists of. There are a few ways or terms used to describe an engine overhaul, for example, some auto service centres term it an 'in-chassis' rebuild. This happens when mechanics don't have to take the whole engine out to rebuild and repair it, or they don't overhaul the whole engine, just components of it such as replacing the pistons rings, cylinder liners or all pistons, if they need replacing. An in-chassis rebuild will surely get your engine back in shape, and its performance will be as good as or better than when it was new. More extensive rebuilding is considered a major engine overhaul, and this requires the whole engine to be lifted from the chassis, so it can be thoroughly taken apart. Every nut, bolt and removable part is cleaned and replaced with new, original factory engine parts. So, a complete engine overhaul is more expensive than an in-chassis rebuild, for obvious reasons – the engine must be removed from the chassis, however, you vehicle's engine will function like new or better. Engine upgrades often require some level of engine rebuilding, in this regard it is quite common. This is why many people rebuild their vehicle's engines every few years, especially for car enthusiasts who care very much how well their cars sound, function and look. An engine rebuild can make your engine look good enough to compete in car shows, but most folks just want their vehicles to be dependable and run their best, and that is exactly what a car engine overhaul can do to your car's engine. An overhaul will extend your engine's life for many more years and return performance to new, or nearly new, conditions – a much better return on investment than trading in for a new machine. What does an overhaul involve? Overhauls involve work on the core of your engine – the area which isn't touched at standard servicing. It's a complex procedure and can include installation of new piston rings, bearings and gaskets plus boring out of the cylinders. Crankshafts and cylinder heads can either be replaced or reconditioned. One overhaul can vary dramatically from another, depending on the areas where your engine performance is less than it was. What type of overhaul is best for my engine? Overhauling an engine isn't a simple task and there are many options to consider such as: How quickly do you need your engine back in operation? What is your budget? Do you have the skills to complete an overhaul or do you need to call in an expert?
